

If your company requires a virtual environment, for security reasons, or to be able to manage certain specific applications, then *ConXioN* vCloudOne might be your solution.

Your data is securely hosted on virtual servers, only managed by you, and protected by a firewall. You can count on the expertise and know-how of *ConXioN* specialists to maintain the physical servers. Systems are constantly up-to-date and adapted to the latest technologies.

## solution overview

A vCloudOne solution is implemented in an extremely reliable environment, on VMware enabled servers. The solution (server, switches, firewalls) is spread across 2 individual datacenters. These are connected through redundant high-speed data fibers.

You are responsible for creating and managing the virtual machines, the OS's and the applications running virtually. All manageable from your office.

## why choose vCloudOne

- No more worries about investments in new servers, costs for IT specialists and future costs for upgrading, repair and replacements.
- Concentrate on your core activities.
- High level security solutions and expertise of specialist at your fingertips
- Flexible and expandable solutions, evolving with your company's needs  
Highly advanced and secured datacenter hosts
- Optimized security: firewall, backup and monitoring
- Choose from a variety of offerings: shared or dedicated; managed by you or *ConXioN*; virtualized servers...
- Best performing connectivity solutions required for the applications

## vCloudOne's advantages

- Create your own virtual servers with your own OS licences
- You maintain responsibility for the applications and support to end-users
- Login remotely to create and manage your virtual servers
- No interruptions while maintenance is performed on the physical servers (updates, repairs...)
- High availability of the infrastructure, fast provisioning and easy updates
- The management interface and use of templates provides ease of configuration and management of the applications
- Includes auto-backup systems
- Includes monitoring of the physical servers
- Virtualization decreases the consumption of energy, hence you and your company contribute to a greener environment

## technical key features

- Physical servers on 2 datacenters (optional for the dedicated)
- High Availability between VMware hosts
- Enterprise-Class SAN Storage and block-based backup
- Fully redundant network and security architecture
- vShield Edge security features
- User-friendly management interface and remote access
- Flexibility for customers to deploy and manage their own servers
- Easy upgrades and import of existing virtual servers
- Work with catalogs and templates
- Belgacom & ConXioN manages physical and virtual layer
